

STATUS DISPLAY FOR  
PARALLEL ACTIVITIES

5 ABSTRACT OF THE DISCLOSURE

66050" T06660  
10 When activities are operated in parallel, and there is only one status display,  
an ordered list is implemented with three methods of access: insertion at the top,  
removal from anywhere, and read of the top item. Items kept on this list are the status  
codes or words for the activities that are currently in progress. When a new activity  
begins, its status code or word is inserted at the top of the list. Whenever an activity  
completes, its code or word is removed from the list regardless of its location in the  
list, and in such a way as to preserve the order of the remaining entries in the list.  
15 Whenever the top entry in the list changes (whether through an insertion or removal),  
the single status display is updated to show the new top value.
